## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kamada (2004/0191666). Kamada teaches a styrene acrylate based toner (examples) having the desired circularity (abstract) and geometric standard deviation (paragraphs 56-57). Kamada teaches that the narrow particle size distribution improves imaging and flowability of the toner. It would have been obvious to one of ordinary skill in the art measure a lower and upper geometric standard deviation to arrive at a similar toner because of the direct suggestion of Kamada to use geometric standard deviation as a toner characteristic as well as in include art recognized toner additives for their known and intended use in toner applications.
- 3. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over each of Ohno (6,528,224) and Inaba (6,051,350) in view of Ong (5,585,215). Ohno and Inaba teach a styrene acrylate based toner (examples) having the desired circularity and a small circularity standard deviation (claims). Although it may not be the same measurement as a geometric standard deviation, Ong (col. 1-2) teaches similar toners with the desired geometric standard deviation. It would have been obvious to one of ordinary skill in the art that improved imaging and flowability are achieved when similar

Art Unit: 1756

narrow ranges are present in toners as evidences by the combination of the teachings Ohno or Inaba with Ong.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark A. Chapman whose telephone number is 571-272-1381. The examiner can normally be reached on Monday - Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Huff can be reached on 571-272-1385. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
